

Distinctive Custom Automated Solutions for World-Leading Products

Eclipse Automation harnesses multi-industry know-how and the power of vertical integration to provide seamless custom automated systems that brings our customers' products to life — on time and on budget. Our network of Eclipse facilities in Canada, the United States, Germany, Switzerland, Hungary, and Malaysia, provides global bench-strength and regional know-how across expert teams that design, build, and integrate advanced automation solutions for many of the world's leading manufacturers.

Our customers value our ability to be their:

Automation Architects — By being involved in the early manufacturing scale-up planning phase, Eclipse is able to fully understand your manufacturing needs and devise your optimal road map, by providing the right level of automation at the right time, optimizing your capital equipment spend.

End-to-End Solution Providers — Total vertical integration from conception to installation, ensuring cost-effective, high-quality, and faster time-to-market results. By having control of the critical path of the project schedule, we are able to deliver on our commitments to on-time delivery and quality.

Global Collaboration Experts — Common procedures and design practices between all our global business units, allows collaboration and project execution to be achieved across large teams and multiple global sites, to move rapidly and in unison, from day one to completion. This is particularly important on large, globally deployed systems to ensure quality, schedule, and cost are optimized.

Risk Mitigation Specialists — By process, Eclipse helps to identify any process and schedule risks early, before project execution and devises actively managed plans to mitigate those risks to ensure they don't affect schedule. This is a key factor to the successful and efficient launch of new products.

Eclipse Automation is now part of Accenture, offering our clients further value, through the digital manufacturing expertise at Accenture Industry X. Through the use of data analytics and other performance enhancing digital solutions, automated manufacturing operations can be scaled quicker than ever before.

Making the process seamless extends to our ability to use our network to our customers' advantage. Our ability to build and service in-region, and our pool of expertise across the world, allows us to offer the most flexible and convenient automation resources as needed.

Our recently opened Malaysian site further extends our reach to bring customers expert regional support, service, and fulfillment in Asia. This site provides low-cost, value-added manufacturing options to best support global programs, including Repeat Equipment Builds. Our Malaysian facility also brings a large team of highly educated engineers, assemblers, and other support people to our global network, enhancing our ability to provide solutions with a powerful follow-the-sun model of service.

With 20 years of complex custom automation experience, the Eclipse team has designed and built innovative systems within a wide range of industries, including Life Sciences, Transportation, Consumer Products, Nuclear Energy, and Electronics. We collaborate with our customers to deliver end-to-end solutions that make their final products extraordinary.
